

Notes on Contributors

Fabio Acerbi is chargé de recherche at CNRS, Paris. He specializes in editing Greek and Byzantine mathematical texts.

Takao Hayashi is professor emeritus of the history of science at Doshisha University, Kyoto, and holds a PhD from the Department of the History of Mathematics of Brown University, Providence. His dissertation was published with the title, *The Bakhshālī Manuscript: An ancient Indian mathematical treatise*, for which he was awarded the Salomon Reinach Foundation Prize by the Institut de France, Paris. He has written extensively on the history of Indian mathematics. Last year he published an annotated Japanese translation of Bhāskara's *Bījagaṇita* with Kṛṣṇa Daivajña's commentary. He has recently completed an annotated Japanese translation of Śrīpati's *Gaṇitatilaka* with Siṃhatilaka Sūri's commentary.

Information for Authors

1. Area and editorial principles

In principle the area to be covered by the journal is the history of exact sciences before A.D. 1600, although the limitation of time need not apply to Asian (including Arabic and Islamic) science.

The main purpose of the journal is to make available original sources in the field. It has been a common practice that source materials in their original languages are not accepted in most other academic journals. Our priority lies in providing such materials, especially critical editions of unpublished texts as well as their translation into modern languages (preferably English) together with comments and notes.

We also accept studies based on original sources, published or unpublished, and their translations. Reviews of books containing original source materials are also welcome.

The papers submitted to the editorial board are judged by at least two referees. The referees are kept anonymous for 10 years following the final decision. Thereafter, the names of the referees may be published on the journal's website.

Manuscripts should be submitted to SCIAMVS with the understanding that upon publication copyright will be transferred to the Editorial Board of SCIAMVS. That understanding precludes SCIAMVS from considering material that has been submitted or accepted for publication elsewhere.

2. Frequency and physical form of the journal

One volume will be published every year, each containing some 200 to 300 pages in A4 (297×210mm) format. In the case of an original source material, it is desirable to include an English translation.

Since we send camera ready sheets to the printing company, the most convenient way of preparing a draft is to use the typesetting software \LaTeX , for which we can provide convenient style files. In the case of original sources which require non-roman fonts, we prefer \XeLaTeX , but are also willing to accept other formats if they meet our basic formatting principles.

Authors will receive one free copy of the issue in which the article appears. Authors are requested to purchase 50 offprints of their paper.

3. Address

All correspondence should be sent to:
